

“Reverse translation capabilities and potential from the network”

This workshop will showcase examples of reverse translation and demonstrate the power of the ECMC Network to deliver this kind of work.

The session will be concluded with a panel discussion to consider:

- How to implement lessons learnt from reverse translation across the network
 - How to engage industry

“Innovation in clinical trial operations”

This session will showcase examples of innovation being used across the ECMC network. Looking at how innovative technology and processes are helping to speed up the delivery of early phase trials across the UK, facilitating improved patient interaction and encouraging learning and sharing of best practice.

Examples will include:

- Use of novel model based statistics
- Innovation in systems and processes with Trial Master Files
- Digital solutions to monitoring clinical trials

“Complex trials 101 - what do you need?”

This workshop will give you a brief overview of what we mean by Complex Innovative Design (CID) trials and the work that the ECMC Programme Office has been doing since the last Annual Network Meeting. We need you to help us shape a range of training opportunities to ensure we are all up to speed on the set up and delivery of Complex Innovative Design trials. Delegates will work in groups to identify gaps in workforce knowledge and the best way of providing the guidance and information required. We will also look not only at gaps but where there is currently best practice and resources that could be shared or made available to the network.

Outcomes from this workshop will help to shape the next steps on this exciting journey into CID trials.
